Angelo Clauin

Fullstack Developer

Perpignan, France clauinangelo@proton.me

Summary

Fullstack developer with deep TypeScript and Node.js expertise, shipping end-to-end airline NDC integrations on a B2B travel platform. Autodidact — programming since age 8, professional since 2025. Builds with Nix, Docker, and GitLab CI; runs self-hosted services (Gitea, mail server, media stack) on a personal cluster. Comfortable across the entire stack from PostgreSQL schemas to Vue 3 components to deployment pipelines.

Skills

Frontend	Vue 3, Nuxt 4, TypeScript, Vuetify 4, Pinia, Vee-Validate, Zod
Backend	Node.js, Express, Sequelize ORM, REST APIs, Swagger/OpenAPI
Databases	PostgreSQL, MongoDB, Redis
Testing	Playwright (data-driven E2E), Mocha, Chai
DevOps	Docker, Podman, Kubernetes, Nix/NixOS, GitLab CI, GitHub Actions, Terraform, Ansible, HashiCorp Vault
Monitoring	Grafana, OpenTelemetry
Languages	TypeScript, JavaScript, Go, Python, Bash
Protocols	NDC (New Distribution Capability), REST, SOAP/XML

Experience

Metis Digital Jul 2025 – Present

Fullstack Developer | Perpignan, France

Developing the **Online Booking Tool** — a multi-service B2B travel platform used by agencies to search, book, and manage flights, hotels, rail, and car rentals, with agent-driven and self-booking (SBT) workflows.

Airline NDC Integrations (end-to-end)

- Implemented **Vueling (VY)** across the full stack: shopping, pricing, instant-payment booking, post-booking seat ancillaries, ServiceList, and SeatAvailability — 19 ancillary features verified end-to-end.
- Integrated **Volotea (V7)** with card fee handling, BSP settlement support, and combined vs. per-leg booking modes. Diagnosed and fixed a passenger duplication and price-doubling bug in the Kyte sandbox flow.
- Built adapter-layer fixes for **Air France/KLM (AFKL)**: date normalization, baggage line deduplication, APIS passenger data fallbacks.
- Developed the **GOKYTE/Kyte GDS aggregator** integration: card fee distribution, hardened error handling with normalized GDS error responses, booking retrieve retry logic.
- Wrote **Playwright E2E tests** using a data-driven framework with Zod-validated scenarios, page objects, and an internal retry/resilience API.

Shared Infrastructure & Tooling

- Built shared utilities used across airline adapters: deep cloning (`safeClone`), flight selection normalization, cross-currency price calculation.
- Contributed to **reshop** (flight rebooking) with cross-adapter fixes spanning multiple airlines.
- Set up E2E test plans for **Singapore Airlines (SQ)** NDC integration using the data-driven regression framework.

Tech stack: Nuxt 4, Vue 3.5, TypeScript, Vuetify 4, Pinia · Node.js, Express, Sequelize, PostgreSQL · Playwright, Zod · GitLab CI, Nix (devenv), Docker

Education

Self-taught developer — programming since age 8 across multiple languages and paradigms. Continuous learning through hands-on projects, open-source consumption, and production work.
